*These is no claim that this bibliography is an exhaustive list of experimental studies authored or co-authored by professional social workers. Such an undertaking is presently not a feasible undertaking. It does serve to demonstrate that social work experiments are common, involve testing many different forms of intervention and are applied with the cooperation of diverse participants from around the world. Readers are encouraged to send the author any missing citations they locate, or to suggest why any included reference should be deleted.

The following criteria were used in selecting references for potential inclusion in this bibliography:
1. The article, book, or chapter was authored or coauthored by at least one professional social worker, for example a holder of a BSW, MSW or Doctorate in social work (Ph.D. or DSW), or the services provided were performed by professional social workers.

2. The citation was published in English.

3. The citation pertained to a primary study involving the presentation of empirical data.

4. Experimental and comparison or control groups were constructed using random assignment techniques.

5. The citation could be located and have its suitability for inclusion verified.

The following criteria were used in rejecting potential citations for inclusion in this bibliography:

1. The article was primarily methodological and only discussed experimental methods, rather than reporting an actual study, with data.

2. It was not clear that services were provided by professional social workers.

3. It was not clear that random assignment methods were employed.
